PROFILE

Staff Engineer and TypeScript Tech Lead, building software since 2015. I align architecture and engineering practices across one or more projects, grow teams, and stay a hands-on contributor.

- TypeScript consistency across projects: typing, tests, clean code, standards, and architecture.
- Coaching and upskilling engineering teams.
- Strong focus on TDD and sound typing; tests as a quality bar, not an afterthought.
- AI loops in the development cycle (agents, workflows), on existing codebases, verified by tests.

SKILLS

Staff / Lead

- TypeScript standards, architecture, CI, reviews — including across multiple projects.
- Upskilling: pair programming, scoping, stack decisions.
- Hands-on: I ship. I don't just steer.

Engineering

- TypeScript backend / frontend (Node.js, Express, React, Vue, Next.js).
- AI loops (agents) verified by tests.
- REST or GraphQL APIs, realtime (WebSockets), Azure and AWS.

OPEN SOURCE

Lumpcode

github.com/lumpcode

CLI and library for agent orchestration in automated development campaigns.

Simple to set up and git-native: opens PRs on its own for migrations, roadmaps, backlogs, and more.

EXPERIENCE

Tech Lead — Keolis, Paris

May 2021 — Present

Owner of the frontend and backend (API) for a transport-network monitoring app, a core tool for the group: ridership, early/late running, interactive maps, full-day replay (animated vehicles on the map).

Used by stakeholders critical to the group: reliability and polish are non-negotiable. Map animations: frontend performance constraints.

Team of 4 web developers, working closely with a Databricks data team. Core stack: TypeScript, Vue, Node.js.

- Architecture: npm monorepo, Clean Architecture; wrote Azure DevOps CI/CD pipelines.
- Team: pair programming, code reviews, agile (Azure DevOps board).
- Stack: TypeScript, Vue 3, Vite, GraphQL (Apollo), Mapbox, SQL. Unit tests and Cypress e2e, strict coverage.
- AI loops: set up to support the team (refactoring, evolution), verified by tests.
- Cross-cutting: occasional advisory on 3 other projects (architecture, practices).
- Also: Databricks pipelines (Python), Azure DevOps support.

Full-Stack Developer — ENGIE, Paris

April 2020 — May 2021

B2B application rewrite. Team of 6 developers, 1 QA, and 1 DevOps. Frontend and backend, contributing to architecture.

- React, GraphQL (Apollo), Prisma, AWS Lambda. TDD. OKTA authentication.

Full-Stack Developer — Meet My Mentor, Paris

February 2020 — April 2020

End-to-end build (frontend, backend, infra) of a masterclass VOD — React, Next.js, GraphQL, MongoDB; AWS VOD infra (S3, CloudFront, Lambda).

Full-Stack Developer — City of Paris, Paris

December 2019 — February 2020

Vue.js booking module for the City of Paris funeral services: Google Maps of agencies, shipped as a WordPress plugin.

Co-founder & CTO — Les Sherpas, Paris

June 2015 — December 2019

Designed and built an online tutoring platform with a teacher marketplace (les-sherpas.co).

- Realtime classroom: video, whiteboard, chat (Socket.io).
- React / Next.js; marketplace matching; Stripe Connect payments; serverless AWS API.
- React Native mobile app; managed 3 developers.

EDUCATION

Digital Architect — École 42, Paris

Sept. 2017 — Jan. 2020

Master in Management — ESCP, Paris

Sept. 2014 — Jan. 2020

Admitted after ECS preparatory class, Lycée Carnot (Paris). Entrepreneurship track.

Licence 3, Mathematics and Probability — Université Paris Sorbonne, Paris

Sept. 2014 — Sept. 2015
