PROFILE

ESCP Master in Management × École 42. Building software since 2015. I embed in client organizations, own 0-to-1 products used in operations, and sit at the business / engineering interface. TypeScript in production; Python and SQL on Databricks. I lead small teams, stay in the code, and built Lumpcode, a git-first agent orchestration CLI.

SKILLS

Lead

- Client-facing delivery: scoping, stakeholders, business / tech interface.
- Architecture, CI, reviews — including across projects.
- Grow teams (pairing, practices); still ship.

Engineering

- TypeScript in production (Node.js, React, Vue, Next.js). Vue.js Certified Senior Developer. REST / GraphQL, Azure and AWS. Docker.
- Python and SQL: Databricks at Keolis; LangChain, RAG; PyTorch, Numba.
- Agentic software: Lumpcode (git-first orchestration).

OPEN SOURCE

Lumpcode

github.com/lumpcode/lumpcode

Git-first agent orchestration CLI: git is the only gate and source of truth. Agents open PRs on their own for migrations, roadmaps, backlogs — built for developers.

EXPERIENCE

Tech Lead — Keolis (SNCF subsidiary — France's public railway), Paris

May 2021 — Present

Joined as senior; team Tech Lead after a year, through delivery.

Owner of the frontend and API for a transport-network monitoring app built from scratch. Used daily by 10+ city networks (Bordeaux, Orléans, Besançon...; 10–80 operators per network) and by marketing to win tenders: ridership, punctuality, interactive maps, full-day replay.

Business-critical: high bar on reliability and finish; map animations are a frontend performance constraint. Team of 4 web developers, working closely with a Databricks data team.

- Architecture: npm monorepo, Clean Architecture; Azure DevOps CI/CD. TypeScript, Vue 3, Node.js, Vite, GraphQL (Apollo), Mapbox, SQL; unit tests and Cypress e2e. Docker for test environments.
- Team: pair programming, code reviews; occasional advisory on 3 other projects (architecture, practices).
- LangChain + RAG agent (prompt-to-indicator): custom indicators from a user prompt. Python / SQL on Databricks. AI also in the engineering loop (fixes, refactors, cleanup) through to production.

Full-Stack Developer — ENGIE, Paris

April 2020 — May 2021

B2B application rewrite. Team of 6 developers, 1 QA, and 1 DevOps. Frontend and backend (React, GraphQL, Prisma, AWS Lambda, OKTA); TDD; AWS architecture and client sprint reviews.

Other freelance work — Paris

Dec. 2019 — Apr. 2020

Meet My Mentor: end-to-end build of a masterclass VOD, shipped to production — React, Next.js, GraphQL, MongoDB; AWS (S3, CloudFront, Lambda). City of Paris: Vue.js frontend for the funeral-services booking module.

Co-founder & CTO — Les Sherpas, Paris

June 2015 — December 2019

Designed and built end to end the site, the marketplace, and an online tutoring platform: 500+ teachers, 1,000+ students tutored (les-sherpas.co).

- Realtime classroom: video, shared whiteboard, text editor, chat (Socket.io). Marketplace matching; Stripe Connect payments; serverless AWS API.
- React / Next.js; React Native mobile app; managed 3 developers on all product development.

EDUCATION

Master in Management — ESCP, Paris (ECS prépa, Lycée Carnot)

Sept. 2014 — Jan. 2020

École 42 — software architecture program, Paris

Sept. 2017 — Jan. 2020

Licence 3, Mathematics and Probability — Université Paris Sorbonne, Paris

Sept. 2014 — Sept. 2015
